

AIR SURVEY — CABIN QUICK CARD

Tablet is locked landscape · screen stays awake
Everything saves the instant you press SAVE
Full detail: [USER-GUIDE.md](#)

MARK A SIGHTING — 3 TAPS

1. Press **MARK** → **say the waypoint # aloud** (it shows big — audio cross-ref)
 2. Tap the **species** button
 3. Tap the **total** → **SAVE**
- Classes called too? Tap Bulls / Cows / etc. — Total auto-fills
 - Chips: **CIRCLED · PHOTOS · CAPTIVE · COLLARED / CHECK · DUP? · NOT DUP** + free notes
 - Fix or delete later: **tap the pin on the map**

COUNTS — THE TOTAL RULE

- **Total alone is fine** — type it, SAVE, done
- Total **typed by hand is authoritative** — classes never change it
- Classes only → Total **tracks their sum** (1 cow + 1 calf = Total 2)
- **Unk = Total - classes** — always derived, never typed
- Classes add up to more than Total → **SAVE is blocked** until it adds up
- Strip order: Bulls · Yearlings · Cows · Calves · Unk · Total
- Templates stack: **1B · 2B · 1C · C+C · C+2C · C+Y**

KEYPAD — NO BACKSPACE (by design)

1	2	3
4	5	6
7	8	9
CANCEL	0	SAVE

- Tap a cell → the **next digit replaces it**
- **Tap the selected cell again to empty it**
- CANCEL asks before discarding what you entered

MAP BUTTONS — BOTTOM RIGHT

SAT / ROAD	LABELS on/off
N↑	+
H↑	-

- **N↑** north-up · **H↑** heading-up (rotates while moving)

LEGS & CREW — DATA SCREEN

- HUD shows **LEG n · ON** while surveying
- New crew, area, or conditions → **STOP LEG**, add a leg, fill in crew + weather
- **AREA (North/South) is manual** — the app never guesses it
- Everything auto-saves as you type

IF SOMETHING GOES WRONG

- App killed / tablet dies → **just reopen it** — everything saved is intact, track resumes
- Buttons dimmed → survey is **closed** (read-only); start or load one from DATA
- Missed something? Add it post-flight: **REVIEW** → + **missed obs** (9001+)
- **Export before leaving the aircraft:** REVIEW → Export → save/send the ZIP
- Paper is the fallback — switch any time, no shame

- Either one **re-centres** on the aircraft
- **Double-tap either = reset zoom** to the 5-line view
- Track: **green = on leg** · **red = OFF SURVEY**
(no leg running)
